Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of three two-story, two-bay wide early Italianate-style brick houses with shed roofs and simple, scroll-sawn bracketed cornices were built c. 1872. The houses retain their original brick facades, which were always painted.

The houses are two stories in height, 12' and 12'6" wide and occupy lots 60'10" deep. Each house is only two rooms deep and there is no backbuilding. The houses are constructed in running bond and were originally painted. Each house has a single hooded chimney located at the rear corner of the house. The shed roofs are capped by a continuous wooden cornice consisting of a crown molding supported by simple scroll-sawn end brackets and simple grooved modillions, set against a plain, deep frieze area.

The tall, narrow window and door openings have flat wood lintels and sills. None of the original 2/2 sash survive and windows are filled with replacement 1/1 or 6/6 sash. The single-light doorway transoms have been covered over and all doors are modern replacements. The houses sit on low basements, lit by a single-light sash. Each house is reached by two concrete steps.

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses is significant in that it represents the level of architectural stylishness achieved by many builders of small street houses in the years after the Civil War when these same builders were erecting large, fashionable houses on the main streets, often facing parks or squares. While building three-story houses on the main streets that might sell for \$2,500 - \$3,500, they were also providing decent, inexpensive housing for the local working classes that might sell for \$700 - \$900. The houses were built according to a pattern that was quite common to all of the city's neighborhoods of the period c. 1870 to 1910. Recognizing that people held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new middle-class neighborhoods going up in west and east Baltimore. Builders acquired anywhere from an eighth to a half of a city block and built 15' to 18'-wide three-story houses on the main streets (priced at different levels according to the importance of the street and the house width), and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks.

Builders usually sold their small street houses to German-American semi-skilled workers and laborers who received mortgages from the wide variety of community and ethnically-sponsored building and loan associations. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties or sold them to other investors. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.
